Open to remote part-time and contract work · 20 h/week while I study

SUMMARY

Software developer finishing a six-year technical high school program in computing. I build web apps end to end: my main project, F1 Hub, streams Formula 1's official live timing to the browser in real time. Looking for a part-time remote or contract role that I can combine with my Systems Engineering degree at UTN, starting in 2027. English (C1).

SKILLS

Languages	JavaScript, Java, SQL
Web	HTML, CSS, Node.js, REST APIs, WebSockets
Databases	MySQL
Tools	Git, GitHub, GitHub Actions, Linux (Ubuntu Server)
Spoken	Spanish (native), English (C1)

PROJECTS

F1 Hub · Personal project

Apr 2026 - Present

- Built a Node.js relay that connects to Formula 1's official live timing feed (SignalR over WebSocket), merges its incremental updates and streams them to every connected browser. Deployed on Render.
- Placed each car on a live track map using mini-sector timing, since the public feed doesn't include GPS positions.
- Automated results with a scheduled GitHub Actions workflow that pulls each finished session from the OpenF1 API and commits the updated data.
- Built an archive of every season since 1990 from the Jolpica (Ergast) API, with precomputed indexes so pages make one small request instead of downloading every season.

JavaScript · Node.js · WebSockets · Chart.js · GitHub Actions · REST APIs

[Live site ↗](#) [Code ↗](#)

Sin Códigos · School project, team of 2

Oct 2026 - Present

- Building a 2D LAN co-op game in Java with libGDX, using a client-server architecture over TCP/UDP.

Java · libGDX · TCP/UDP sockets

School database · Team of 5

Jul 2025 - Dec 2025

- Designed a MySQL database to manage a technical school: students, courses, subjects, grades and staff.
- Wrote triggers, functions, stored procedures and views, set up role-based user permissions, and loaded over 10,000 sample grades for testing.

MySQL · SQL

EXPERIENCE

Intern, Server Setup and Web Hosting · Technical School No. 35

Mar 2026 - Nov 2026

- Set up a server in the school's rack and connected it to the school network.
- Installed and configured Ubuntu Server and hosted the school's website on it, saving the cost of external hosting.

EDUCATION

Systems Engineering · UTN, National Technological University

Starting Mar 2027

Computer Technician diploma · Technical School No. 35 “Ing. Eduardo Latzina”

2021 - 2026

Six-year technical high school program. Coursework: object-oriented programming, algorithms and data structures, systems analysis and development, databases, networking and systems administration.
